

## Integration – DevOps Engineer

Amphinicy Technologies is a leading provider of complex software solutions for the space industry. For over 20 years, from our two offices – Croatia and Luxembourg, we are delivering solutions to the top players in the satellite industry, including a long-lasting partnership with SES (Luxembourg) and ESA. From our beginning, we are dedicated to excellence in engineering services and our engineers are leading experts in the domains of Satellite Communication and Earth Observation.

We are seeking an innovative, creative **Integration - DevOps Engineer** who is ready for the challenges, responsibilities, and rewards that come with working in a high-energy, fast-paced environment.

### As Integration - DevOps Engineer, you will

- Be a part of a team responsible for defining, implementing and maintaining the automatic setup and configuration of mostly Linux environments.
- Fit the bill for an engineer who likes to script.
- Create, maintain and document the virtualized and containerized systems.
- Work with the architects, developers and validation engineers to come up with deployment architecture and tooling.
- Provide training and support related to deployment tooling to field engineers.
- Recognize the need for a stand-alone communication system to be highly available and self-contained.

### As a prerequisite to become our Senior Integration Engineer you

- Hold a Bachelor or Master's degree in Engineering (Computer Science or Telecommunication) and have at least
- 3 years experience in a DevOps environment
- Have strong interest in Linux based systems.
- Are inquisitive, have passion for new technologies, are dynamic and flexible.
- Have scripting skills (shell, Python, Ruby, ...)
- Are eager to learn and to stay on top of new technologies.
- Are fluent in English.
- Have an affinity with one or more of the following topics.
  - RHEL/CentOS experience
  - Linux optimization
  - Configuration management with Puppet
  - Hands-on virtualization experience
  - Hands-on containerization/kubernetes experience
  - Cloud management and orchestration (like terraform)
  - Build automation and testing CI/CD

### Once on board you will

- Build and maintain solution components that bridge the gap between customer's expectations and our customer's core platform offerings.
- Work in a modern environment using new technologies
- Be a member of a passionate team that values openness and a can-do mentality
- Take pride in enabling internet connectivity to the world (from schoolchildren in remote areas to in-flight WIFI)

### Your personality:

- You are a good listener and an excellent team player
- You are capable of working in changing environments
- You are committed and self-motivated
- You have an entrepreneurial attitude with a 'can do' mentality

### What we offer:

- Working in a small, well-positioned and growing company in the space industry
- Collaboration with leading space companies on EU flagship space projects
- Key contribution/involvement in our innovative product development

- Perfect multicultural environment and with the quality of life in Luxembourg
- Help with accommodation and/or relocation
