

C# “Skyline DMA” Developer (1 Position)

Your future as a C# Skyline DMA Developer

You will design and implement C# based modules in the C# .Net based Skyline DMA (Dataminer) network management framework. This is part of the multiservice satellite communications platform that allows satellite service providers to build and adapt their network easily as their business grows. You become part of a committed team of experienced and talented colleagues.

You will actively participate in the development process, with ownership of several components within the overall architecture.

Your Skills and qualifications

- Junior/Medior C# Developer
- Bachelor degree Computer Science or equivalent by experience
- Eager to learn the Skyline DMA platform and passionate about software development
- Excellent team player
- Good communication skills, written and spoken English

You will be working with

C#, The Skyline Dataminer platform, Network protocols (TCP/IP, SNMP), Windows, REST, SQL/NoSQL database; Jenkins, Git / Bitbucket, Devops

Optional: Linux, Python.
